UNDERSTANDING LEVELING FEET

Before Purchasing

Before deciding on a material for your leveling feet, it is essential to determine whether the material has the proper load rating for your application. The load rating of a leveling foot refers to the maximum load capacity of the product.

Types of Leveling Feet

Standard: Can be used for heavy-weight appliances, conveyors, machinery, and other equipment.

Stud: Designed with a large-diameter pad and integral stud.

Jig: Contains a removable pad and a handy hex socket that allows convenient adjustment from the stud end.

Jig Feet Leveling Assemblies: These heavy-duty Jig Feet Leveling Assemblies include a radius head screw, tapped plate, and hex nut.
